

Simoun Ezequiel Tusi

Full-Stack Developer · BS Computer Science, UPLB

📍 Calamba City, Laguna | 📞 0935 733 0435 | ✉️ tusi.ekel@gmail.com | 🌐 github.com/234ekel234 | 🔗 linkedin.com/in/simoun-ezequiel-tusi

Full-stack developer who builds and runs **business-critical systems solo** — from data model to deployment and maintenance. Shipped enterprise maintenance, warehouse, and payroll systems now in active use.

TECHNICAL SKILLS

Languages	Ruby (Rails), JavaScript (Node.js / React), Python, Go, SQL, R
Frameworks	Ruby on Rails, Express.js, Flask, React, React Native (Expo), Next.js
Databases	PostgreSQL, MySQL, Prisma ORM
Tools & Infra	Docker, Git, Linux/Bash, Microsoft 365 Administration, Vercel, DigitalOcean
Core	REST API design, ETL / data pipelines, server-enforced access control, payroll-engine development, data modeling, business process analysis
Exposure	Java, C, Assembly, Dart (Flutter), LLMs, MongoDB, Firestore, Firebase

PROFESSIONAL & CLIENT PROJECTS

Programmer — FMI (Facility Management & Integration) Apr 2026 – Present

Sole developer building enterprise systems end to end with no senior oversight — all now in active use across the company.

- CMMS** (React Native/Expo · Express.js · PostgreSQL · Prisma · DigitalOcean) — Maintenance & workforce platform that replaced a ~\$2,400/yr off-the-shelf SaaS. Role- and site-scoped access for 4 roles **enforced server-side** (unassigned sites return 403), a multi-tenant client portal, work orders, PM checklists, attendance, and audit trail. Delivered the MVP ~26 days early, 13 core features.
- WMS** (Ruby on Rails · PostgreSQL · Docker) — Real-time inventory with a **supervisor approval gate** and **automated replenishment** computed from 12 months of usage history (safety stock, reorder points, order quantities). Per-batch expiry alerts, PO/SO-linked transactions, QR scanning, audit trail, dashboard, Excel import/export, in-browser DB backup.
- DTR / Biometric Consolidator** (Python · Flask · ETL) **IN PROGRESS** — ETL pipeline ingesting attendance from multiple biometric devices, each in a different format, via per-device adapters; reconciles and deduplicates into clean daily time records; REST API planned for payroll/HR.

SMT Payroll System · Ruby on Rails · PostgreSQL Dec 2025 – Mar 2026

Independent Developer — Paid Client Project

- Full payroll engine for ~100 employees: automatic time-slicing, overtime, night differential, and legal/special holiday calculations.
- Alias-mapping layer reconciling biometric display names against an employee masterlist, eliminating manual ID lookups.
- Excel payroll-slip generation (RubyXL) with per-company logo injection; print-ready output for HR. Delivered end to end through client handover.

Sanro Inventory — Legacy System Migration · Ruby on Rails · Docker · Ubuntu Oct 2025 – Nov 2025

Independent Developer — Paid Client Project

- Revived a 2015 inventory & invoicing system that no longer ran on modern Linux by containerizing the unsupported stack in an older Ubuntu Docker image.
- Performed a full data migration to a new on-premise server with minimal downtime — keeping the shop operational with zero rewrite.

PMAFI Foundation Website · Next.js · Tailwind CSS · Google Sheets · Vercel **LIVE** 2026

- Designed and built the official 8-page website for the Philippine Military Academy Foundation, Inc.
- Server-side member status check reading a private Google Sheet (roster never reaches the browser); client-side Digital Member ID generator with QR; full SEO/structured data, 100/100 Lighthouse accessibility, ~P0/mo operating cost.

Full-Stack Developer Intern · Sails.js · GitHub Jun 2024 – Aug 2024

City Human Resource Management Office

- Built a full Learning & Development module managing training programs, materials, and employee training records.
- Collaborated with a team using Git/GitHub for version control and iterative delivery.

ACADEMIC & TECHNICAL PROJECTS

Thesis — LLM-Driven Analysis & Detection of Vulnerabilities in Filipino Credentials

- Built an LLM-based framework to detect credential-tweaking vulnerabilities using synthetic identity generation (DeepSeek-R1) and a Hybrid Similarity Score (Cosine + Damerau-Levenshtein).
- Filtered 884.5M breach entries to ~21.2k Filipino passwords, evaluated 5 LLMs, and shipped a React/Vue evaluation tool (4.5/5 usability).

EDUCATION

B.S. Computer Science — University of the Philippines Los Baños (UPLB)

Relevant Coursework: Database Systems · Data Structures & Algorithms · Software Engineering · Artificial Intelligence · Machine Learning · Compiler Design
